

### Issue?

When tablet is turned on it shows a boot up screen.

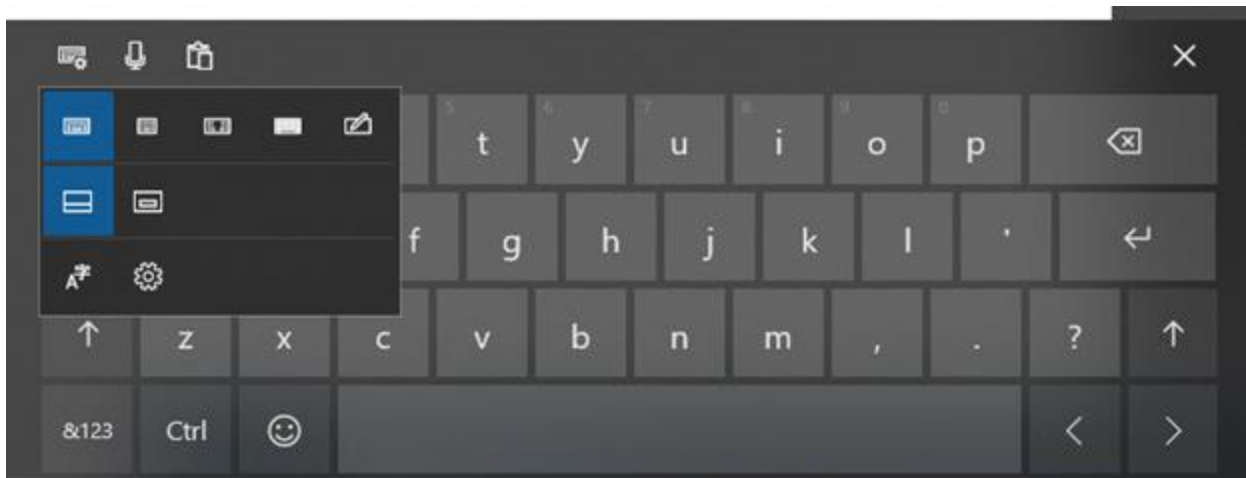

### How do I fix this?

- Plug in USB keyboard and power up the tablet
- When you see the Mobile Demand splash screen **press the delete key** to enter the **BIOS**
- Arrow over to the right until you arrive at the **Boot Menu (tabs on top)**
- Ensure the Windows Boot Manager option is in the first spot
- If not in first position change it to the first spot
- Move to the Save & Exit tab to Save

### Note

If after the change the Keyboard settings do not stretch across the bottom of the screen, make this change.
